PROFESSIONAL SUMMARY

Backend Engineer with 2+ years of experience architecting scalable microservices using Java 17, Spring Boot, and Spring Cloud. Proven expertise in modernizing legacy systems, integrating AI workflows.

SKILLS

Languages & Frameworks: Java, Python, SQL, JPQL, Spring Boot, FastAPI, Spring AI, Spring Data JPA, Hibernate.

Microservices: REST APIs, Apache Kafka, gRPC, WebSocket, Eureka, API Gateway, Resilience4j, Event-Driven Design

Databases: PostgreSQL, MySQL, Redis (cache & pub/sub), Flyway, Liquibase, pgvector

Cloud & DevOps: AWS (EC2, S3, SNS, SES), Docker, Kubernetes (K8s), Git, GitHub Actions, CI/CD Pipelines

Testing & Monitoring: JUnit 5, Mockito, Unit/Integration Testing, Prometheus, Grafana, ELK Stack

Security & AI: JWT, OAuth2, RBAC, Passkeys, OpenAI GPT-4o, Gemini API, RAG, TimeFold AI

Tools & Integrations: IntelliJ IDEA, Postman, Swagger / OpenAPI, HubSpot, Zoom SDK, Stripe, Razorpay, Cashfree

PROFESSIONAL EXPERIENCE

Oodles Technologies

Apr 2024 – Present

Associate Backend Developer | Gurugram

- Microservices Migration:** Led the architectural decomposition of a core monolithic application into decoupled Spring Boot microservices. Designed isolated domain databases and integrated Resilience4j circuit breakers to prevent cascading failures, improving system throughput by 20% and lowering regression defects by 15%.
- High-Throughput Optimization:** Resolved severe database bottlenecks by fixing JPA/JPQL execution plans and N+1 select queries. Implemented a multi-tier Redis caching layer that significantly reduced database read-load.
- Real-Time Event Pipelines:** Engineered an asynchronous HubSpot webhook processing pipeline featuring custom RBAC filtering. Optimized thread-pool execution to handle sudden surges in external CRM events, achieving stable, sub-second data synchronization into PostgreSQL.
- Infrastructure Modernization:** Spearheaded the migration of production services from Java 8 to Java 17 and Spring Boot 3.3.x. Eliminated critical security vulnerabilities from legacy dependencies and standardized automated schema management across environments via Flyway and Liquibase.
- Applied AI:** Built a natural language interface using Spring AI and GPT-4o for secure SQL generation and semantic search, reducing legal document processing time by 40%.
- Distributed Monitoring:** Built centralized telemetry infrastructure using Prometheus, Grafana, and the ELK Stack to track application metrics and log traces across distributed microservices, reducing the engineering team's mean-time-to-resolution (MTTR) by 30%.
- Financial Batch Ingestion:** Designed and automated multi-tenant payroll workflows utilizing Spring Batch to reliably process high-volume daily runs, ensuring strict transactional isolation and data boundaries between corporate tenants.
- Engineering Leadership & QA:** Championed rigorous code health by establishing JUnit 5 and Mockito testing patterns that maintained code coverage above 85%. Led system design reviews (HLD/LLD) and mentored a team of 5 associate engineers through technical delivery.

PROJECTS

Therapy And Beyond

- Migrated a legacy monolithic application to a microservices architecture and upgraded services from Java 8 to Java 17, improving scalability, maintainability, and performance.
- Designed and implemented asynchronous processing for shift generation workflows, enabling the creation of recurring shifts up to one year in advance while significantly reducing API response times.
- Integrated Redis caching for frequently accessed data, reducing database load and improving application responsiveness.
- Implemented token-based authentication between FastAPI and Spring Boot services, securely validating and propagating access tokens across distributed systems.
- Developed and maintained REST APIs, collaborated on production deployments, and contributed to performance optimization and system reliability initiatives.

FinTech Event Ticketing and Webinar Platform

- Engineered an end-to-end ticketing and live webinar architecture, natively integrating Zoom SDK components for reliable in-platform video streaming infrastructures.
- Developed a multi-currency payment checkout engine (Stripe, Razorpay, Cashfree) with strict database idempotency, increasing cross-border sales volume by 20%.

EDUCATION

Shri Ramswaroop College of Engineering and Management

Apr 2018 – Jun 2022

Bachelor of Technology | Lucknow
